Authorization for this examiner's amendment was given in a telephone interview with Ninna Lee on 04/13/09.

The application has been amended as follows:

- **Abstract**, delete "Fig. 5".
- **Claim 1**: delete claim 1 and replace it with:
 - 1. (Currently Amended) An inkjet printhead comprising:
a wafer having a droplet ejection side and a liquid supply side opposite the droplet ejection side,
a plurality of nozzles formed on the droplet ejection side of the wafer,
a plurality of individual liquid passages corresponding to each nozzle respectively, each of the individual liquid passages leading to each nozzle respectively for providing ejectable liquid to the associated nozzle; and
droplet ejection actuators and associated drive circuitry corresponding to each nozzle respectively, the droplet ejection actuators and associated drive circuitry being formed on the droplet ejection side of the wafer such that the droplet ejection actuators are positioned between the droplet ejection side of the wafer and the plurality of nozzles; wherein,

each of the individual liquid passages has a hole extending into the wafer from the liquid supply side of the wafer to form a fluid connection with the hole; and wherein,
the droplet ejection actuators are thermal bend actuators.--

- **Claim 6** is cancelled.
- **Claim 11**: delete claim 11 and replace it with:
 - 11. (Currently Amended) A method of ejecting drops of an ejectable liquid from an inkjet printhead, the printhead comprising a wafer having a droplet ejection side and a liquid supply side opposite the droplet ejection side, a plurality of nozzles formed on the droplet ejection side of the wafer, a plurality of individual liquid passages extending from the liquid supply side to each nozzle respectively;
drop ejection actuators and associated circuitry corresponding to each nozzle respectively, the droplet ejection actuators and associated drive circuitry being formed on the droplet ejection side of the wafer such that the droplet ejection actuators are positioned between the droplet ejection side of the wafer and the plurality of nozzles, wherein the ejection actuators are thermal bend actuators;
the method of ejection drops comprising the steps of:
providing the ejectable liquid to each of the nozzles using the individual liquid passage respectively associated with each of the nozzles; and

actuating the droplet ejection actuators to eject droplets of the ejectable liquid from the nozzle.--

- **Claim 16** is cancelled.
- **Claims 21-30** are cancelled.
- **Claim 31**: delete claim 31 and replace it with:

-- 31. (Currently Amended) A printer system incorporating an inkjet printhead comprising:

a wafer having a drop ejection side and a liquid supply side opposite the droplet ejection side,

a plurality of nozzles formed on the droplet ejection side of the wafer,

a plurality of individual liquid passages leading to each nozzle respectively for providing ejectable liquid to the associated nozzle; and,

drop ejection actuators and associated drive circuitry corresponding to each nozzle respectively, the droplet ejection actuators and associated drive circuitry being formed on the droplet ejection side of the wafer such that the droplet ejection actuators are positioned between the droplet ejection side of the wafer and the plurality of nozzles; wherein,

each of the individual liquid passages has a hole extending into the wafer from the drop ejection side, and a supply passage extending into the wafer from the liquid supply side of the wafer to form a fluid connection with the hole; and wherein the ejection actuators are thermal bend actuators.--

- Claim 36 is cancelled.

The following is an examiner's statement of reasons for allowance:

- The primary reasons for allowance for claims 1-5, 7-15, 17-20, and 31-35, 37-40 are the inclusion of droplet ejection actuators and associated drive circuitry corresponding to each nozzle respectively, the droplet ejection actuators and associated drive circuitry being formed on the droplet ejection side of the wafer such that the droplet ejection actuators are positioned between the droplet ejection side of the wafer and the plurality of nozzles; wherein, each of the individual liquid passages has a hole extending into the wafer from the liquid supply side of the wafer to form a fluid connection with the hole; and wherein, the droplet ejection actuators are thermal bend actuators.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
